What do we mean by digital tools?

By digital tools we mean software and platforms for teaching and learning that can be used with computers or mobile devices to work with text, images, audio, and video. Tools for language learning and teaching may include:

- programmes for editing digital materials (e.g., audio, video), and
- platforms for collaborating and sharing resources.

Many tools designed for other fields of education, or not specifically for educational purposes, are nonetheless eminently suited to language education. Similarly, many language teachers use digital tools for different purposes, for instance to

- prepare teaching materials and set homework assignments;
- collect samples of learners’ work and provide feedback; and
- streamline other aspects of their professional lives.

A selection of tools the ITILT team of language teacher educators has found particularly versatile for all types of teaching is provided in the next section.

**Getting started**

1. passwords
2. online office suite
3. message board
4. link shorteners

**Digital tools**

Basic education technology for language education

*View 12 plus 1 basic tools online*

Basic tools

A slideshow including a dozen key tools can be viewed at http://bit.ly/2hX1Pgc. The tools are all free, though not all open source, and cover the following aspects of digital tool use in language education:

- getting started,
- writing and feedback,
- collaboration and sharing,
- audio and video,
- social media, and
- low-tech classes;

(You can even learn how to create a short link at bit.ly)

Why are digital tools important in language education?

Digital tools are relevant for language learning and teaching because they can be used to adapt digital resources to provide input, that is, samples of the target language or L2 which are suitable for exploitation in class.

We use the terms L1 to refer to a learner’s first (native) language or mother tongue, and L2 to mean any language learned after the first, the target of language teaching. Sometimes we also distinguish second languages, learned in an environment where the target language is commonly spoken (e.g., Turkish in Turkey), from foreign languages, usually referring to classroom learning where the ambient language is different (e.g., English in France). Often, however, the umbrella term second language covers both contexts.

Digital audio and video editors allow teachers to focus on selected sections of a longer recording, for example. Similarly, both oral sources and written text can be adapted for comprehension activities using transcription tools and hyperlinks to dictionary or

http://bit.ly/2hE6NUi
encyclopedia references. The importance of input and its role in second language acquisition and learning is discussed in the first ITILT mini-guide on Digital Resources.

Research has shown, however, that learning a second language may involve more than input: interaction and feedback are also beneficial to learners. Some of these findings and implications for teaching are shown in Table 1.

Table 1: Output and interaction

<table>
<thead>
<tr>
<th>SECOND LANGUAGE RESEARCH FINDINGS</th>
<th>IMPLICATIONS FOR SECOND LANGUAGE CLASSROOMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instruction should allow learners freedom to produce the target language spontaneously in interaction (Ellis, 2005)</td>
<td>DO create frequent opportunities for learners to produce output and interact spontaneously</td>
</tr>
<tr>
<td>UG theory suggests rich natural input is sufficient for acquisition, while cognitive and (socio-)constructivist models emphasise interaction, scaffolding and feedback; these approaches are not necessarily incompatible (Myles, 2002)</td>
<td>DO provide scaffolding for learners to produce language, as well as feedback on performance</td>
</tr>
</tbody>
</table>

Whyte (2014)

Teachers should design activities which allow learners to produce output, or express themselves in the target language by writing, speaking, and interacting with one another. Learners should have support, or scaffolding, to help them use the L2, and teachers should give them feedback on the language they produce.

Communicative language teaching (CLT), particularly approaches following Krashen’s natural approach developed in the US in the 1980s, are based on the belief that input alone is “necessary and sufficient” for learning a second language. More recent methods assume that both interaction and feedback improve the efficiency of language teaching.
In Table 2, further recommendations regarding feedback are provided.

Table 2: Explicit instruction and feedback

<table>
<thead>
<tr>
<th>SECOND LANGUAGE RESEARCH FINDINGS</th>
<th>IMPLICATIONS FOR SECOND LANGUAGE CLASSROOMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Errors may be specific to a given L1 or general to all second language learners; they are an inevitable part of interlanguage development and do not respond to immediate explicit correction (Lightbown, 2000)</td>
<td>DON'T attempt to correct all learner errors explicitly and DON'T assess learners' progress only in terms of controlled production in decontextualised conditions</td>
</tr>
<tr>
<td>Instruction should also involve controlled production, allowing learners to focus on form and develop explicit rule-based knowledge (Ellis, 2005)</td>
<td>DO create opportunities for focus on form in meaningful contexts</td>
</tr>
<tr>
<td>Teachers should focus on vocabulary, taught in context and with structural information; grammar instruction should be minimised, and focus on word order, not inflections (Cook, 1998)</td>
<td>DO focus on meaning and teach vocabulary in context</td>
</tr>
<tr>
<td>Specific instruction in pronunciation is important for retention, and writing instruction is also necessary since L1 literacy skills are not automatically transferable (Cook, 1998)</td>
<td>DON'T neglect pronunciation and writing skills, which require attention as well as listening and speaking</td>
</tr>
</tbody>
</table>

Whyte (2014)

Task-based language teaching (TBLT) is a language teaching method which allows learners opportunities to interact and produce language in meaningful contexts, and to correct errors and provide feedback in terms of specific tasks. Thus it respects many of the principles for effective teaching established by second language research.

In the following chapter, we show how these principles influence our use of digital tools.
Chapter 2

Tools in focus

*an example of digital tool use*

The ITILT project’s approach to integrating technologies in language education is through task-based language teaching (TBLT), where teaching and learning activities are organised in a task sequence. So instead of listing digital tools for teachers to use, we propose in this mini-guide to show how tools can be integrated into tasks. More on TBLT can be found in the [ITILT project handbook](http://bit.ly/2h6ENUi) and in references in the final section of this mini-guide.

Overview of the story slam task

Among the French classes involved in the project are students in an undergraduate university course on media and communication for English majors. Both the idea for the task, and the resources for preparing for it come from the US storytelling organisation The Moth (themoth.org). See the [Digital Resources](http://bit.ly/2h6ENUi) mini-guide for more information.

The task sequence involved the following activities and the main task was to prepare a story to tell in class. Three class were set aside for story slams over the semester of twelve 90-minute sessions: 8 or 10 students would each tell a personal 5-minute story related to the day’s theme. Here we focus on the tools used in activities 3 and 4.

### Table 3: Story slam task sequence

<table>
<thead>
<tr>
<th>Activity</th>
<th>Website</th>
<th>Link</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Learn about the Moth story format</td>
<td>The Moth <a href="http://bit.ly/2h6ENUi">https://themoth.org/stories</a></td>
<td></td>
</tr>
<tr>
<td>2. Prepare a story on a chosen theme and deliver it in class</td>
<td>(Optional: be part of the Moth jury to choose winners for grand slam in last class)</td>
<td></td>
</tr>
<tr>
<td>3. Record your story as you tell it in class, and upload it to share with the teacher</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Listen to recording with individual feedback from the teacher, and consult general suggestions for improvement</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Write a reaction to this experience, including response to feedback, in a final reflective paper</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The digital tools used for the third and fourth activities are as follows:

1. During the storytelling task
   a) **Smartphones**: students each used the voice recorder function of their smartphones to make an audio recording of their story as they told it live in front of the class.
   b) **Evernote**: the teacher used Evernote to note any language errors (under the standard headings of pronunciation, grammar/vocabulary, communication) for each student.

2. After the task
   a) **Soundcloud**: students uploaded their audio files to this open audio sharing platform
   b) **Google forms**: each student sent the direct link to their recording via a form created using this survey/questionnaire tool

3. Teacher feedback
   a) **Wordpress**: the teacher created a post on her blog using this blogging platform to report on common errors and provide suggestions for sites and activities to improve in specific areas.
   b) **Gmail canned responses**: the teacher created a template for e-mail messages to individual students, including the link to their Soundcloud recording, another link to the blog post with general feedback, and a reminder of course requirements.

View the stories on [itilt.eu](http://bit.ly/2h6ENUi).

ITILT 2017
Students on the jury to choose winners for grand slam in the last class used templates like this to assess the stories they heard:

![Story slam Panel feedback form](http://bit.ly/2h6ENUl)
Key qualities of story slam tools

Looking back at the principles of **providing opportunities for output** and **offering feedback on performance**, we can see how these tools help the teacher meet the recommendations given in Tables 1 and 2.

First, the learners have an opportunity to **produce language in a meaningful context**. The audience has not heard their stories in advance, so the information conveyed is new. The students listening are also in a context which favours engagement with the content of the stories: they are not asked to evaluate the storytellers or listen for language errors - instead they need only listen to brief personal stories which have been planned and rehearsed for the occasion. Only a small panel of student judges is required to assess the quality of the stories, but the criteria used are formal (timekeeping, relevance, structure - see p. 9) and not focused on L2 proficiency.

Comparing these stories with other kinds of student presentation recorded at home, it is clear they correspond more closely to naturally occurring speech - there is no reading aloud, and even memorised language is produced more fluently in the presence of a live audience.

![Table showing resources, activities, and other possibilities](http://bit.ly/2h6ENUi)
Using Soundcloud to share learner recordings also has consequences for feedback. The teacher listens to each story twice: once live in front of the class, and a second time online, as an evaluation exercise alongside other student performances. This allows some perspective,

- helping distinguish patterns of errors and separating isolated mistakes from more systematic problems; and

- allowing comparison across learners at distance from factors related to personality and social skills which may influence impressions of L2 proficiency.

This helps the teacher provide focused individual feedback and also offer more general comments in relation to problems shared by a number of students in the class. This fulfils research recommendations not to neglect pronunciation (see Table 2).

Since the feedback is on their own stories recounted spontaneously, it can be considered to be focus on form in context, which is thought to be an optimal condition for effective learning. Activity 5 in the task sequence also encourages learners to engage with feedback by asking them to identify key problems and suggest their own programmes for improvement.

The final consideration with the tools shown in this example concerns efficiency.
A number of features of this task are worth considering as ways to reduce unproductive use of teacher time:

- the use of a Google form to record student names, e-mails, and Soundcloud links again shifts the onus of making audio recordings available for evaluation on to learners. The Google forms tool automatically creates a spreadsheet to record information entered into the form, which the teacher can then use to record comments and grades. No time is wasted searching e-mail for student messages or Soundcloud for student accounts.

- the Wordpress blog post also offers an opportunity to save time by aggregating feedback for the whole class in one easily accessible place. For teachers working in relatively stable teaching conditions, such posts can be updated for other classes and subsequent student cohorts.

- the canned response feature of Gmail allows the teacher to created an e-mail template for providing individual feedback on recordings to each student. Used in combination with the Google form spreadsheet, it makes it easy to personalise messages with the student’s own SoundCloud link, for example, but also avoid forgetting general information which all students need to know.

In the following chapter we consider further examples of the types of digital tools available for interactive teaching in a task-based framework drawn from the ITILT project.
Chapter 3

From the ITILT project
teacher views of digital tools

Classroom tasks

This section of our mini-guide highlights the use of digital tools in a number of task sequences designed for different educational and proficiency levels.

Cultural background and perspectives on the world
(Secondary English, Belgium)

This task sequence used a telecollaborative exchange between US and Belgian students to explore the influence of cultural background on our view of the world.

Google hangout for global collaboration
http://www.itilt2.eu/
The classes used two quiz tools in addition to Padlet for asynchronous collaboration, and the Google video communication tool Hangouts for synchronous interaction.

- **Padlet**
- **Quizlet**
- **Kahoot**
- **Google Hangouts**

Using Padlet for our introduction was ideal for the project. I really love the comment function in the tool, enabling students to react to the posts of other students. However, some of the video files were too big to upload to Padlet, we had to use a workaround by uploading the videos to Google Drive and linking to the videos on Padlet.

BELGIAN TEACHER

A website on the city of Lille (Secondary French, Belgium)

Another Belgian task sequence, this time in French, also used the Kahoot quiz creator in addition to a different tool to support oral production, **CuePrompter**.

The pupils were to give an account of the whole project, describe the different stages, their experiences working together over several weeks, and the day trip to Lille. So it was a long story, but they didn’t have to learn it by heart: with the tool CuePrompter they could read their text while still looking more or less into the camera recording the video.

BELGIAN TEACHER
A number of primary teachers in the ITILT project used the iPad application BookCreator to allow learners to combine pictures and record their own audio to tell stories.

It is an excellent example of teaching to use technology. The teacher manages the whole class effectively to allow her to focus on small groups of learners at a time, both demonstrating the iPad functions and providing opportunities for learners to participate. The learners are taught to use the iPad, to take care while framing each shot, as well as to work together and take turns harmoniously.

**FRENCH TRAINER**

In this task we learnt new sentence connecting words. We know the main Welsh words we were using but sometimes we didn’t know how to write them in a sentence.

We took turns using the iPad – writing and recording – so that everyone had a chance to use it.

We used Google Translate to help us make sure of spelling and to hear how to pronounce certain words that we were unsure of.

**WELSH PUPILS**
Recommended tools

These examples show how tasks can be developed from using a variety of tools to create activities following a broad TBLT format.

More recommendations from teachers and partners in the ITILT project are shown below:

ITILT participant feedback: a Belgian secondary EFL teacher

During this project, sometimes it felt like I was losing precious teaching time. Not all things went smoothly all the time and that’s when you start breaking a sweat. I guess this happens now and then when you try new lesson ideas, so it was bound to happen during a whole lesson package without any textbooks or workbooks to back me up.

At the same time this felt liberating. Not having to teach this or that word or expression and just seeing where the pupils ended up and trying to push them a little bit further. I also feel I won’t lose as much time the next time I do these lessons.

“when all the little pieces of the puzzle finally came together during the last lessons, both my pupils and I were glowing with pride”

All the ICT tools I used are teachable in 10 minutes max. The pupils get it in under 5 minutes, older colleagues might need 15 minutes sometimes... But it’s really easy. As it should be, since all these web 2.0 tools are designed for user comfort.

The peer evaluation, using Google forms, gave the pupils a sense of responsibility and fair play. Since they could ‘peek’ now and then during the lessons, they saw what other groups were working on and soon found out if they needed to ‘up their game’. Afterwards, it certainly didn’t feel like wasted time, on the contrary!

The wide range of tools available online and their sometimes ephemeral nature makes it unwise to recommend specific sources. The website creator used by Belgian ITILT teacher just quoted is already no longer in service. It is no doubt more efficient for teachers to curate their own evolving collections of tools, particularly in collaboration with other colleagues.

Ways to do this are suggested in our third mini-guide Digital Networks.

Don’t forget: play safe

Teachers using digital resources for teaching should be careful to play safe, by making sure any learner productions placed online are protected, that is:

• shared privately, or
• anonymised if shared publicly, and
• with parental permission (minors) or informed consent (adults).

It is also important to play fair. Check the ITILT Digital Resources mini-guide for more on the licensing of online materials.
